

DIY CANDY BOX TEMPLATE

from @mycraftyperspective

What to do:

1. Print the template on cardstock of your choice, then flip it over and stamp, foil or emboss whatever design you like on the back.
2. Score along the 5 lines that run horizontally across the template, and fold them inward.
3. Score and fold along the 2 lines that run vertically down the template, down the center of the diamond shapes. Use scissors to cut the diamonds out.
4. Score along the dotted lines that run parallel to those folds (one on either side), and fold them in the opposite direction to the folds in step 3
5. Start rolling the box up. All lines of the template should be on the inside..
6. To assemble, place double-sided tape along the outward-facing edge of the last panel, using it as a flap. Overlap the opposite end and press down to secure.
7. Tie ribbon of your choice on one end of the box, tight enough so nothing will fall out.
8. Fill your box with treats, then tie up the other end with ribbon.
